## Justification for DCR about TNC, Adaptator, SMA and SSMA female

This new DCR is to correct the coupling proof torque test on female connector.

Detail specification concerned are 3402002, 3402003, 3402005, 3402006, 3402009, 3402010, 3402022, 3402023, 3402027, 3402028.

The coupling proof torque is not applicable for female connectors, as explained in 3402, the aim is to check that the coupling mechanism shall not be dislodged.

So, on RF connector, it tests that the assembly between the connector body (\*1) and the coupling nut (\*2) is conform and that the ring(\*2) maintain correctly those two parts.

By design, there is no coupling mechanism on RF female type screw connector so this test is not relevant.
