Paragraph:

Figure 3(b) Mode Select Table - page 13

Original wording:

Proposed wording:

In addition to general changes to the specification format/layout/content for the 4000B series as summarised in ESCC approved DCR90, there are some additional specific technical changes to this specification as follows :

1) Figure 3(b) Mode Select table is deleted and replaced by the Truth Table plus the general notes (in para 1.8(note 2), 1.9(note 1), 1.10(note 3) & 2.3.3(note 1) that for the purposes of Testing, the device is configured to function as a Triple Inverter.

- see attached sheets for current and new spec.

Justification:

This DCR is raised for clarification and for conformity of content and format within the 4000B series of specifications. The existing mode table pattern 1 reflects the configuration used in the spec for testing purposes - as per the clarifications/modifications per this DCR. All other patterns are included for no specific reason and are considered redundant.

1.7.5 Consolidated Notes

1. Index area; a notch or a dot shall be located adjacent to Pin 1 and shall be within the shaded area shown. For chip carrier packages, the index shall be as shown.
2. The dimension shall be measured from the seating plane to the base plane.
3. The true position pin spacing is 1.27mm between centrelines. Each pin centreline shall be located within ± 0.13 mm of its true longitudinal position relative to Pin 1 and the highest pin number.
4. The true position pin spacing is 2.54mm between centrelines. Each pin centreline shall be located within ± 0.25 mm of its true longitudinal position relative to Pin 1 and the highest pin number.
5. All terminals.
6. 12 spaces for flat, dual-in-line and small outline packages.
16 spaces for chip carrier packages.
7. Index corner only - 2 dimensions.
8. 3 non-index corners - 6 dimensions.
9. For all pins, either pin shape may be supplied.

NOTES:

1. Pin numbers relate to FP, DIP and SO packages only
2. For the purpose of testing in accordance with this specification, unless otherwise specified, the component pins shall be connected as follows to configure the component to function as a Triple Inverter (Positive Logic $Y = \bar{A}$) :

$$V_{DD} = Q2PD = Q3PD \quad (\text{Pin 14 to 2 to 11})$$

$$V_{SS} = Q2NS = Q3NS \quad (\text{Pin 7 to 4 to 9})$$

$$Q1ND = Q1PS \quad (\text{Pin 8 to 13})$$

$$Q2ND = Q2PS \quad (\text{Pin 5 to 1})$$

NOTES:

1. The definition of Input and Output pins is based on configuration of the component to function as a Triple Inverter.

1.10 TRUTH TABLE

1. Logic Level Definitions: L = Low Level, H = High Level.
2. Positive Logic: $Y = \bar{A}$.

Notes to Electrical Measurement Tables

1. Unless otherwise specified all tests shall be performed with the component configured to function as a Triple Inverter. Unless otherwise specified all inputs and outputs shall be tested for each characteristic, inputs not under test shall be $V_{IN} = V_{SS}$ or V_{DD} and outputs not under test shall be open.
2. Functional tests shall be performed to verify Truth Table with $V_{OH} \geq V_{DD} - 0.5V$, $V_{OL} \leq 0.5V$. The Maximum time to output comparator strobe = 300 μs .
3. Quiescent Current shall be tested using the following input conditions:
 - (a) All Inputs Q1G = Q2G = Q3G = V_{IH} .
 - (b) All Inputs Q1G = Q2G = Q3G = V_{IL} .
4. Interchange of forcing and measuring parameters is permitted.
5. Input Clamp Voltage 2 to V_{DD} , V_{IC2} , shall be tested on each input as follows:-
