Title: Requirements for Lead Materials and Finishes for Components for Space Application

| | | | |
|---------|-------|--------|---|
| Number: | 23500 | Issue: | 7 |
|---------|-------|--------|---|

Other documents affected:

Page:

7

Paragraph:

3.3

Original wording:

Type 4 - Hot solder dip
....For leaded packages the coating shall have a thickness of 2.5µm to 13µm.....

Proposed wording:

Type 4 - Hot solder dip
...for leaded packages with rectangular section, the coating shall have a minimum thickness limit of 5.08µm ; For leaded packages with round section, the coating shall have a minimum thickness limit of 1.52 µm....

Justification:

Having a unique requirement common to US standards defined in MIL-PRF-38535 Table A-III for IC's or MIL-PRF-19500 Table H-I for Discrete for coating thickness.
Prior writing this DCR, it has been approved by CNES and ESCC

Modifications:

The original proposed wording to Para. 3.3 Type 4 is modified as follows; see attached specification mark-up 23500 Draft 8A:

Replace with the following:
For leaded packages with round leads, the thickness of the solder shall be 2.5µm minimum.
For leaded packages with rectangular leads, the thickness of the solder shall be 5.08µm minimum.
