Appendix A for STM

Paragraph:

Appendix A for STM

Original wording:

Proposed wording:

Together with DCR154 item 18 proposing an amendment to Appendix A for STM, this DCR proposes to add a note to Appendix A for STM that High and Low Temperatures Electrical Measurements during screening may be considered guaranteed but not tested based on successful wafer level pilot lot testing.

Note to Appendix A to be as follows:

.....

Item Affected
Deviations from High and Low Temperatures Electrical Measurements

Description of Deviations

All characteristics specified may be considered guaranteed but not tested if successful pilot lot testing has been performed on the wafer lot which includes characteristic measurements at high and low temperatures per the Detail Specification. A summary of the pilot lot testing shall be provided if required by the Purchase Order.

.....

Justification:

To incorporate specific deviations requested by manufacturer STM within appendix A which are considered technically acceptable based on the ESCC approved PID for this and other ESCC qualified components manufactured by STM and the following information provided by STM:

STM has performed an analysis/correlation between internal pilot lots testing (3 pilot lots taken from different diffusion lot

and diffusion run) and Customer lots delivered using same wafer/diffusion lot - see attached relevant reports (rapport / annex1 / annex2).

This analysis shows that the measurements done as part of pilot lot are representative of the measurements done on Customer lots, without any significative drift.

Sujet : Suppression de la table 2 a.c (electrical measurements at room température ac parameters) et table 3 (électrical measurement a high and low temperatures)

Notre analyse porte sur deux transistors représentatifs de notre famille de produit : le 2N2222A de type npn et le 2N2907A de type pnp.

Une analyse a été faite sur 3 lots pilotes par type de transistors provenant : de lot de diffusion différent
:de serie de diffusion different

Annexe1

| <u>2N2222A</u> | | 50 pieces/ lp (soit 150 pieces) | | |
|-----------------------|---------------------|---------------------------------|---------------|--------------------------|
| N° LP | N° LOT DE DIFFUSION | N° WAFER | N° de PSL | Qte de pieces assemblées |
| 653 | 4.9614.001 | 210874 | 10512 à 12529 | 11953 |
| 704 | 4.9721.001 | 216348 | 13593 à 14345 | 15025 |
| 861 | 4.9649.001 | 215454 | 12960 à 15003 | 8543 |
| <u>2N2907A</u> | | 50 pieces/ lp (soit 150 pieces) | | |
| N° LP | N° LOT DE DIFFUSION | N° WAFER | N° de PSL | Qte de pieces assemblées |
| 640 | 4.9440.002 | 206144 | 10374 à 10400 | 10380 |
| 719 | 4.9648.001 | 214705 | 15066 à 14564 | 9887 |
| 724 | 4.9724.007 | 216461 | 13132 à 14599 | 7539 |

Une analyse a également été faite sur les mesures effectuées des lots clients issus de ces wafers de ces mêmes lots de diffusion et comparé aux résultats des lots pilotes(annexe 2)

annexe 2

*le tableau résume les tests conformes à la spec de détail ESCC
Les valeurs entre parenthese sont celles des lots pilotes*

Conclusion :

Les résultats nous montrent que les mesures effectuées sur les lots pilotes sont représentatives des mesures effectuées sur les lots clients et qu'il n'y a aucune dérive significative.

De ce faite ST propose de supprimer les Read and Record Table 2 AC et Table 3 high and low température, et de spécifier que ces paramètres sont déjà mesurés au cours du lot de qualification de chaque wafer. Ceci fera l'objet d'un appendice commun dans chaque spécification de détail. Voir proposition de la DCR jointe.
