Paragraph:

Total re-write (for variants 01 & 02) plus new specification generated (for Variant 03)

Original wording:

Proposed wording:

Total reformat of this Detail Specification as part of the ongoing conversion of specifications to the ESCC format (applies to SMA Loads: Variants 01 & 02). For variant 03 (TNC Load) a separate specification (No.58) has been raised (based on 3403/006).

See as follows for a summary of the changes. See also attached 3403/006 Issue 2 Draft C and No.58 issue 1 Draft B.

note: known support for active procurement against this specification (all 3 variants) includes the following Manufacturer: RADIALL / F

Summary of changes to the current format, layout and content is as follows:

1. Rewording and restructure of various sections and paragraphs of the specification plus other editorial changes based on the layout and editorial content of other Detail Specifications for similar components already converted to ESCC format plus the converted Generic 3403.

2. Deletion of any redundant paragraphs.

3. Para 2: Applicable Documents is amended to delete the references to 3402/003 & 3402/008 and MIL-G-45204 specifications.
(see 12 & 17 below).

4. Table 1(a): Variant 03 (TNC Male Load), plus all Variant 03 specific requirements in the spec, are deleted (and transferred to new spec No.58).

(To separate the SMA and TNC families into individual specs)

5. Table 1(b): DC Power rating is added to the Maximum Ratings table.
(to be consistent with Generic 3403).

6. Table 1(b), 2, 6: Maximum Ratings Table, Room Temperature Electrical Measurements Table, Intermediate and End-point Electrical Measurements Table: change impedance (& resistance) values to be 47.5 ohm minimum to 52.5 ohm maximum.
(This is due a standardisation by the manufacturer (Radiall/F) to a +/-5% tolerance on impedance (& resistance) for 50ohm coaxial components (for Space/Mil/Commercial product)).

7. Table 1(b): Coupling Proof torque is added to the Maximum Ratings table.
(to be consistent with Generic 3403).

8. Table 1(b): Maximum Ratings table (and also Table 6) unit for RF leakage corrected to be "dBi" (was "dB")
(clarification/correction of error)

9. Table 1(b): Frequency range for Variant 03 is corrected to be DC to 18GHz (was to 22GHz).
(clarification)

10. Figure 1: Parameter Derating Requirements are moved to be a note to the Maximum Ratings table.

11. Figure 2: Variant 01 dim B corrected to be 8.5mm to 9.5mm (was 7.8mm to 8mm)
(technical error).

12. Figure 2: Physical dimensions:
The drawings are amended to only include critical dimensions (Variant 01: Dim's D E F are deleted, Variant 02: Dim F is deleted).
References to 3402/001,& 3402/002 & 3402/008 are deleted and the applicable Interface Dimension drawings are added (female and/or male).
In addition the applicable Mating Gauge Dimensions (Female and/or Male Interfaces) are added from 3402/001, 3402/002 & 3402/008 with the thread definition for variant 01 & 02 corrected to be "0.250-36 UNS-2A" (was "0.260-36 UNS-2A").
(to be consistent with Generic 3403 and for consistency/clarification).

13. Para 4.2: Deviations from Generic spec is amended; i.e. Residual Magnetism deviation is added; the existing deviations are deleted.
(to be consistent with the updated Generic specification ESCC 3403)

14. Para 4.3.2: Weight requirements are moved to the Component Type Variants table.

15. Para 4.3.5: Contact Engagement and Separation Forces: Details from 3402/003 are included in this para (applicable to Variant 02 only)

Date: 2006/02/08	Date sent: 2006/02/08	Organisation: ESA/ESTEC
Status: IMPLEMENTED		

16. Para 4.3.5: Residual Magnetism is deleted to match the generic spec requirements. The "information only" limits for Variants 02 & 03 are deleted.
("information only" requirements are considered redundant).

17. Para 4.4: Materials: the gold plate reference to MIL spec is deleted. Gaskets are added to list of included materials.
(For consistency with other ESCC detail specs for similar components)

18. Para 4.5: Marking: Delete requirement for marking of the testing level letter from the ESCC Component Number.
(as per latest ESCC No. 21700).

19. Para 4.7.2: Conditions for Burn-in: Delete the recovery period requirement of 24 +/-2 hours for after burn-in.
(the generic spec allows the test to be performed within 24h; this is considered sufficient).

20. Table 3: "Resistance Drift" is renamed as "Temperature coefficient of Resistance" with symbol "TCR".

21. Table 3: Measurement of Resistance is changed to be a DC test (not an RF test at 2, 12.4 & 22 GHz)
(Resistance is specified at DC condition).

22. Figure 4: mechanical test schematic is deleted (the requirements for mounting in the generic spec are considered sufficient).

23 . Figure 5(b): operating life test set-up is deleted.
(the requirements for operating life in the generic spec are considered sufficient).

24. Table 6 is amended to include all applicable test requirements (Bump, Coupling Proof Torque, Mating and Unmating Forces, Connector Repeatability, Residual Magnetism, Power Sensitivity, Corrosion, Permanence of Marking are deleted).
(to be consistent with the updated Generic specification ESCC 3403).

Justification:

(see also change details for each item above):

A. Part of the ongoing activity of conversion of cover-sheeted ESA/SCC specifications to the ESCC format.

B. To make the format, presentation and content editorially and technically consistent with the various other ESCC Detail Specifications already converted to ESCC format.

C. To make the content consistent with the proposed ESCC format Generic Specification No.3403 issue 2.

D. To maintain the component family structure of individual detail specifications (by extracting the TNC Load (leaving SMA loads remaining) from 3403/006)

Modifications:

The following additional changes are included in this DCR:
Page 6 Table 1(b) Peak Power for Variant 03 (TNC variant) in new ESCC spec No.58:
