Maximum voltage standing wave ratio (VSWR)

Paragraph:

Figure 2(b) Variants
ELECTRICAL CHARACTERISTICS
Maximum voltage standing wave ratio (VSWR)

Original wording:

Proposed wording:

$1.05+0.003 \times F$ (GHz)

Justification:

$1.05+0.003 \times F$ (GHz) instead of $1.03+0.03 \times F$ (GHz).

Due to the mechanical tolerances of each detached parts, it is difficult to hold the requirements of VSWR value declared in the detail specification ESCC 3402/.

The waste production are quite important as lots of assembled parts (5 to 20%).

Requests for extension of VSWR values have been handed out to our customers Astrium and Thales, the penalty $1.05 + 0.003 \times F$ meets their requirements for this type of adaptators.

Note : For an adaptator qualified according to ESCC3402/003 limited at 18 GHz, (SMA technology), the limit of VSWR value is $1.10+0.008 \times F$.
