None.

. .

1. <u>GENERAL</u>

1.1 <u>SCOPE</u>

This specification details the ratings, physical and electrical characteristics, test and inspection data for Resistors, Fixed, Wirewound, based on Type RWR 81. It shall be read in conjunction with ESA/SCC Generic Specification No. 4002, the requirements of which are supplemented herein.

1.2 TYPE VARIANTS AND RANGE OF COMPONENTS

Variants of the basic type resistors and the range of components covered by this specification are given in Table 1(a).

1.3 MAXIMUM RATINGS

The maximum ratings, which shall not be exceeded at any time during use or storage, applicable to the resistors specified herein, are as scheduled in Table 1(b).

1.4 PARAMETER DERATING INFORMATION

The derating information applicable to the resistors specified herein is shown in Figure 1.

1.5 PHYSICAL DIMENSIONS

The physical dimensions of the resistors specified herein are shown in Figure 2.

1.6 FUNCTIONAL DIAGRAM

The functional diagram for the resistors specified herein is shown in Figure 3.

2. APPLICABLE DOCUMENTS

The following documents form part of this specification and shall be read in conjunction with it:-

(a) ESA/SCC Generic Specification No. 4002, Resistors, Fixed, Wirewound.

TABLE 1(a) - TYPE VARIANTS AND RANGE OF COMPONENTS

VARIANT	COATED MOULDED INDUCT		INDUCTIVE	NON-INDUCTIVE	LEADS	
	COATED	MOULDED	INDOCTIVE		25mm	35mm

3. TERMS, DEFINITIONS, ABBREVIATIONS, SYMBOLS AND UNITS

For the purpose of this specification, the terms, definitions, abbreviations, symbols and units specified in ESA/SCC Basic Specification No. 21300 shall apply. In addition, the following symbols are used:-

- I_T = Test current.
- R_A = Resistance value measured at ambient temperature (+22±3 °C).
- R_i = Insulation resistance.
- U_T = Test voltage.
- U_{proof} = d.c. or r.m.s. voltage proof.

 $U_{over L} = Overload voltage.$

4. **REQUIREMENTS**

4.1 GENERAL

The complete requirements for procurement of the resistors specified herein shall be as stated in this specification and ESA/SCC Generic Specification No. 4002 for Resistors, Fixed, Wirewound. Deviations from the Generic Specification, applicable to this specification only, are detailed in Para. 4.2.

Deviations from the applicable Generic Specification and this Detail Specification, formally agreed with specific Manufacturers on the basis that the alternative requirements are equivalent to the ESA/SCC requirement and do not affect the components' reliability, are listed in the appendices attached to this specification.

4.2 DEVIATIONS FROM GENERIC SPECIFICATION

4.2.1 <u>Deviations from Special In-process Controls</u>

None.

4.2.2 Deviations from Final Production Tests (Chart II)

(a) Para. 9.1, Overload: The conditions shall be as follows:-

Voltage : $\sqrt{5PnRn}$ or $2U_L$, whichever is less. Duration: 5 seconds. If better than 0.1%, use the Figure 1 curve.

- 4.2.3 <u>Deviations from Burn-in and Electrical Measurements (Chart III)</u> None.
- 4.2.4 <u>Deviations from Qualification Tests (Chart IV)</u>
 (a) Para. 9.18, Maximum Time Constant: Not applicable to inductive resistors.
- 4.2.5 <u>Deviations from Lot Acceptance Tests (Chart V)</u>
 (a) Para. 9.18, Maximum Time Constant: Not applicable to inductive resistors.
- 4.3 MECHANICAL REQUIREMENTS
- 4.3.1 Dimension Check

The dimensions of the resistors specified herein shall be checked. They shall conform to those shown in Figure 2.

4.3.2 <u>Weight</u>

The maximum weight of the resistors specified herein shall be as per Table 1(a).

Rev. 'A'

4.3.3 Robustness of Terminations

The requirements for robustness of termination testing are specified in Section 9 of ESA/SCC Generic Specification No. 4002. The test conditions shall be as follows:-

Applied Force : 10 Newtons.

Duration : 5 to 10 seconds.

4.4 MATERIALS AND FINISHES

The materials and finishes shall be as specified herein. Where a definite material is not specified, a material which will enable the resistors specified herein to meet the performance requirements of this specification shall be used. Acceptance or approval of any constituent material does not guarantee acceptance of the finished product.

4.4.1 Enclosure or Protective Coating

Resistor assemblies shall be protected by a coating or enclosure of moisture-resistant insulating material which shall completely cover the outside of the resistor element, including connections of terminations. The coating shall not crack, craze, drip, run or form globules at any temperature up to and including +275°C, regardless of the mounting position of the resistor.

The protective coating or enclosure shall be such that it minimises the establishment of leakage paths between the terminals resulting from collection of moisture film on the outside surface of the resistor.

4.4.2 Lead Material and Finish

The material shall be Type 'L' with Type '3' finish in accordance with the requirements of ESA/SCC Basic Specification No. 23500.

4.4.3 <u>Wire</u>

Each resistor shall be wound with a conductor having no joints, welds or bands within each terminated resistance element. In no case shall the nominal diameter be less than 20 microns.

4.5 <u>MARKING</u>

4.5.1 <u>General</u>

The marking of all components delivered to this specification shall be in accordance with ESA/SCC Basic Specification No. 21700 and the following paragraphs. Each component shall be marked in respect of:-

- (a) The SCC Component Number.
- (b) Electrical Characteristics and Ratings.
- (c) Traceability Information.

4.5.2 The SCC Component Number

The SCC Component Number shall be constituted and marked as follows:

	<u>4002</u>	<u>00501B</u>
Detail Specification Number		
Type Variant (see Table 1(a))		1
Testing Level (B or C, as applicable)		

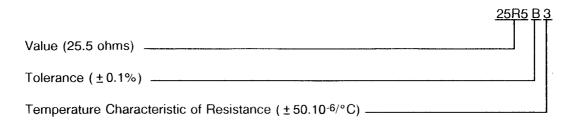

4.5.3 Electrical Characteristics and Ratings

The electrical characteristics and ratings to be marked in the following order of precedence are:-

- (a) Numerical value.
- (b) Tolerance.
- (c) Temperature Characteristic of Resistance.

The information shall be constituted and marked as follows:-

4.5.3.1 Resistance Values

• >2-

Resistance values shall be expressed by means of the following codes.

The unit quantity for marking shall be Ohms.

RESISTANCE VALUE	CODE
0.XXX	RXXX
X.XX	XRXX
XX.X	XXRX
XXX	XXX0
XXX 10 ¹	XXX1

For values of 100 and above, the first three digits (X) represent significant figures and the last digit specifies the number of zeros to follow.

When values of less than 100 are required, the letter 'R' is used to indicate the decimal point. When the letter is used, all succeeding digits represent significant figures.

4.5.3.2 Tolerance

The tolerances on numerical values shall be indicated by the letter codes specified hereafter:-

ТС	DLERANCE (%)	CODE LETTER
	± 0.1	В
	± 0.5	D
	± 1.0	F
	± 2.0	G
	± 5.0	J

4.5.3.3 Temperature Characteristic of Resistance

The temperature characteristic of resistance shall be indicated by the numerical codes specified hereafter:-

DIGIT	TEMPERATURE CHARACTERISTIC OF RESISTANCE ± 10 ⁻⁶ / °C
9	30
3	50
4	100

4.5.4 Traceability Information

Traceability information shall be marked in accordance with ESA/SCC Basic Specification No. 21700.

4.5.5 Marking of Small Components

Where it is considered that a component is too small to accommodate the marking as specified above, as much as space permits shall be marked. The order of precedence shall be as specified in Para. 4.5.1.

The marking information in full shall accompany each component in its primary package.

4.6 ELECTRICAL MEASUREMENTS

4.6.1 <u>Electrical Measurements at Room Temperature</u>

The parameters to be measured at room temperature are scheduled in Table 2. The measurements shall be performed at T_{amb} = + 22 ± 3 °C.

4.6.2 <u>Electrical Measurements at High and Low Temperatures</u>

The parameters to be measured on a sample basis at high and low temperatures are scheduled in Table 3. AQL shall be 0.65% (Level II) out of the total production lot. The distribution of the sample shall be as follows:-

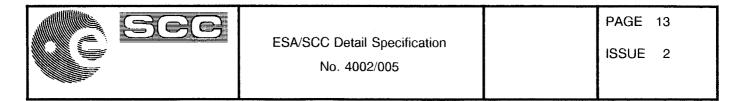

- 1/3 with lowest resistance values.
- 1/3 with highest resistance values.
- 1/3 with median resistance values.
- 4.6.3 <u>Circuits for Electrical Measurements (Figure 4)</u>

Not applicable.

4.7 BURN-IN TESTS

4.7.1 Parameter Drift Values

The parameter drift values applicable to burn-in are specified in Table 4 of this specification. Measurements shall be performed at $T_{amb} = +22 \pm 3$ °C. The parameter drift values (Δ) applicable to the parameter scheduled shall not be exceeded. In addition to these drift value requirements for a given parameter, the appropriate limit value specified in Table 2 shall not be exceeded.

4.7.2 <u>Conditions for Burn-in</u>

The requirements for burn-in are specified in Section 7 of ESA/SCC Generic Specification No. 4002. The conditions for burn-in shall be as specified in Table 5. Resistors shall be tested with a d.c. voltage with a ripple not exceeding 5%. A voltage of 50V or $\sqrt{P_nR_n}$ (see Figure 5(a)) or a current of 50V ÷ Rn or \sqrt{Pn} ÷ Rn (see Figure 5(b)), shall be applied in cycles of 90 minutes "on" and 30 minutes "off" throughout the test. The resistors shall be connected by their terminations to suitable clips on a rack of insulating material.

The resistors shall be so arranged that the temperature of any one resistor does not appreciably influence the temperature of any other resistor. There shall be no undue draught over the resistors. After the period specified in the Generic Specification, the resistors shall be removed from the chamber and allowed to cool under normal atmospheric conditions for a minimum of 4 hours.

4.7.3 Electrical Circuits for Burn-in

Alternative circuits for use in performing the burn-in tests are shown in Figures 5(a) and 5(b) of this specification.

4.8 <u>ENVIRONMENTAL AND ENDURANCE TESTS (CHARTS IV AND V OF ESA/SCC GENERIC</u> SPECIFICATION NO. 4002)

4.8.1 Measurements and Inspections on Completion of Environmental Tests

The parameters to be measured and inspections to be performed on completion of environmental tests are scheduled in Table 6. The measurements shall be performed at $T_{amb} = +22 \pm 3$ °C.

4.8.2 Measurements and Inspections at Intermediate Points during Endurance Tests

The parameters to be measured and inspections to be performed at intermediate points during endurance tests are scheduled in Table 6. The measurements shall be performed at $T_{amb} = +22 \pm 3$ °C.

4.8.3 Measurements and Inspections on Completion of Endurance Tests

The parameters to be measured and inspections to be performed on completion of endurance tests are scheduled in Table 6. The measurements shall be performed at $T_{amb} = +22 \pm 3$ °C.

4.8.4 Conditions for Operating Life Tests (Part of Endurance Testing)

The requirements for operating life testing are specified in Section 9 of ESA/SCC Generic Specification No. 4002. The conditions for operating life testing shall be as specified in Table 5 and Para. 4.7.2 of this specification.

4.8.5 <u>Electrical Circuits for Operating Life Tests</u>

The circuit for use in performing the operating life tests is shown in Figure 5.

4.8.6 <u>Conditions for High Temperature Storage Test (Part of Endurance Testing)</u>

The requirements for the high temperature storage test are specified in Section 9 of ESA/SCC Generic Specification No. 4002. The conditions for high temperature storage shall be $T_{amb} = +275(+0.5)$ °C.
